

Listing of Claims:

This listing of claims reflects all claim amendments and replaces all prior versions, and listings, of claims in the application. Material to be inserted is in **bold and underline**, and material to be deleted is in ~~strikeout~~ or (if the deletion is of five or fewer consecutive characters or would be difficult to see) in double brackets [[]].

Please amend claims 1, 5, 17, and 20 as set forth below.

1. (Currently Amended) A system for managing handicap data during a game of golf, said system including:

a golf club information system with access to information regarding the identity of individual golf players, handicap information for each registered golf player, and golf course information,

characterized in **having a** first and second electronic means for storing and processing scores during said game,

each of said first and second electronic means being adapted to fetch identity and handicap information for at least one player, as well as golf course information from said golf club information system before a game session commences,

each of said first and second electronic means being adapted to receive score data for said player(s) during the game session,

said first and second electronic means being adapted to exchange the score data, compare the data entered and verify the correctness of said data, and

wireless communication means for transferring the verified score data to the golf club

information system, said golf club information system being adapted to compute an updated handicap value for said player(s) from the verified score data and store said updated handicap value.

2. (Original) A system as claimed in claim 1, characterized in that said first and second electronic means are adapted to store a backup copy of the verified score data.

3. (Original) A system as claimed in claim 1, characterized in that said first and second electronic means are separate handheld units, the score data being transferred between the units by said wireless communication means.

4. (Original) A system as claimed in claim 1, characterized in that said first and second electronic means are separate processes running in a common handheld unit, the score data being transferred between the first and second electronic means internally in the unit.

5. (Currently Amended) A system for managing handicap data during a game of golf, said system including:

a golf club information system with access to information regarding the identity of individual golf players, handicap information for each registered golf player, and golf course information,

characterized in **having a** first and second portable electronic means for storing and processing scores during said game,

each of said first and second electronic means being adapted to fetch identity

and handicap information for at least one player, as well as golf course information from said golf club information system before a game session commences,

said first and second electronic means being adapted to receive score data for said player(s) during the game session,

said first and second electronic means being adapted to transfer score data to the golf club information system by wireless means during the game session, the golf club information system being adapted to compare the data entered, verify the correctness of said data, compute an updated handicap value for said player(s) and return the updated handicap value to the respective electronic means, whereby said first and second electronic means will receive updated handicap values during the game.

6. (Original) A system as claimed in claim 5, characterized in that said first and second electronic means are separate handheld units.

7. (Original) A system as claimed in claim 5, characterized in that said first and second electronic means are separate processes running in a common handheld unit.

8. (Original) A system as claimed in claim 3, 4, 6 or 7, characterized in that said units are dedicated electronic units.

9. (Original) A system as claimed in claim 8, characterized in that said wireless communication system is based on IR, Bluetooth, 430 MHz communication, or another Radio Frequency communication system.

10. (Original) A system as claimed in claim 3, 4, 6 or 7, characterized in that said units are Personal Digital Assistants and/or cellular phones and/or play terminals, said first and second electronic means being applications loaded from said golf club information system before said game commences.

11. (Original) A system as claimed in claim 10, characterized in that said wireless communication system is based on IR, and/or a short range Radio Frequency communication system, and/or GSM, GPRS, UMTS.

12. (Original) A system as claimed in claim 1 or 5, characterized in that said golf club information system comprising a local server with a local database.

13. (Original) A system as claimed in claim 12, characterized in that the local server is connected to a regional server with a regional database holding handicap data.

14. (Original) A system as claimed in claim 13, characterized in that the local server and/or the regional server is equipped with a web interface.

15. (Original) A system as claimed in claim 1 or 5, characterized in that said golf club information system comprises a local terminal connected to a regional server with a regional database holding handicap data.

16. (Original) A system as claimed in claim 1 or 5, characterized in that said golf

club information system comprises a regional server with a regional database holding handicap data.

17. (Currently Amended) A system as claimed in claim ~~15 or 16~~ 1 or 5, characterized in that said **golf club information system comprises a** regional server **that** includes a Web interface.

18. (Original) A method for managing handicap data during a game of golf, said method including the following steps:

- loading handicap and golf course information for at least one player into a first portable electronic scorecard means from a golf club information system before a game session commences,
- characterized in
- loading handicap information for said player(s) into a second portable electronic scorecard means from said golf club information system before said game session commences,
- entering score data for said player(s) into the first electronic means during the game session,
- entering score data for said player(s) into the second electronic means during the game session,
- transmitting the score data entered into the first unit to the second unit,
- comparing the data entered into the first unit with the data entered into the second unit,
- verifying the correctness of said data,
- transferring the verified score data to the golf club information system,
- computing an updated handicap value from the verified score data, and
- storing said updated handicap value.

19. (Original) A method for managing handicap data during a game of golf, said method including the following steps:

- loading handicap and golf course information for at least one player into a first portable electronic scorecard means from a golf club information system before a game session commences,

characterized in

- loading handicap information for said player(s) into a second portable electronic scorecard means from said golf club information system before said game session commences,
- entering score data for the player(s) into the first electronic means during the game session,
- entering score data for the player(s) during the game session,
- transmitting the entered score data from the first electronic means to the golf club information system by wireless means during the game session,
- transmitting the entered score data from the second electronic means to the golf club information system by wireless means during the game session,
- comparing the data entered into the first unit with the data entered into the second unit,
- verifying the correctness of said data,
- computing an updated handicap value for the player(s),
- storing said updated handicap value, and
- returning the updated handicap value to the respective electronic means during the game session, whereby said first and second electronic means will receive updated handicap values during the game.

20. (Currently Amended) A device for managing handicap data during a game of

golf, including a Central Processing Unit (2.1), a memory (2.4), a user interface (2.3), external communication means (2.2), said memory (2.4) being adapted to receive and store golf score data for at least one player,
characterized in **having** means for synchronizing the data stored in said memory (2.4) with data stored in other corresponding units.

21. (Original) A device as claimed in claim 20,
characterized in that said external communication means are wireless communication means.

22. (Currently Amended) A device as claimed in claim 20, characterized in **having**
Global Positioning System device connected to said device.
